2. Brief Summary

An interactive Excel dashboard that analyzes over **190,000 Zomato restaurant records** to uncover business insights on restaurant performance, customer ratings, pricing, cuisines, and location trends.

3. Project Overview

The food delivery industry generates large volumes of data that can be used to understand customer preferences and restaurant performance. This project demonstrates how Microsoft Excel can transform raw restaurant data into meaningful business insights through data cleaning, analysis, and interactive dashboard design.

The dashboard allows users to explore restaurant data using filters and visualizations, making it easier to identify trends and support business decisions.

4. Problem Statement

Restaurant businesses need accurate insights to improve customer satisfaction, optimize pricing, and understand market demand. However, raw datasets are difficult to interpret without proper analysis.

This project aims to solve this problem by creating an interactive Excel dashboard that enables users to analyze restaurant performance, customer ratings, cuisine popularity, pricing, and geographical distribution.

5. Dataset

Dataset: Zomato Restaurant Dataset

Total Records: Approximately **190,000**

Dataset Features

- Restaurant Name
- City
- Area/Location
- Cuisine
- Restaurant Type
- Average Cost for Two
- Rating
- Number of Votes
- Online Order Availability
- Table Booking Availability

Data Cleaning Performed

- Removed duplicate records
 - Handled missing values
 - Standardized location names
 - Corrected inconsistent text values
 - Created calculated columns using Excel formulas
-

6. Tools & Technologies

- Microsoft Excel
 - Pivot Tables
 - Pivot Charts
 - Slicers
 - Conditional Formatting
 - Excel Formulas
 - Data Validation
 - Dashboard Design
-

7. Methods

The project followed the complete data analysis workflow:

1. Data Collection
 2. Data Cleaning
 3. Data Preparation
 4. Exploratory Data Analysis (EDA)
 5. Pivot Table Analysis
 6. Interactive Dashboard Development
 7. Business Insight Generation
-

8. Key Insights

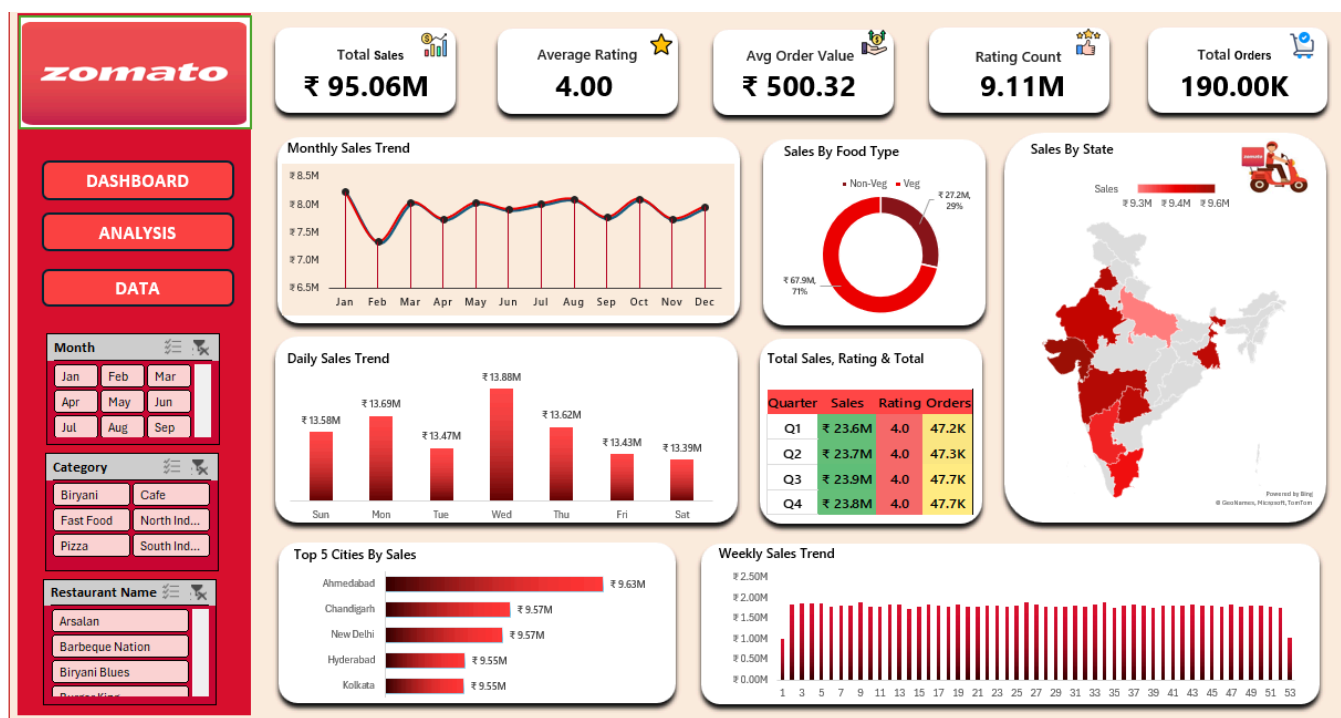

- Identified the highest-rated restaurants.
- Found the most popular cuisines.
- Compared restaurant pricing across locations.
- Analyzed customer voting patterns.
- Studied the relationship between ratings and customer votes.
- Evaluated the impact of online ordering and table booking.
- Identified restaurant distribution across different areas.

9. Dashboard Features

The interactive dashboard includes:

- Total Restaurants
- Average Rating
- Average Cost for Two
- Restaurant Distribution
- Cuisine Analysis
- Area-wise Analysis
- Online Order Analysis
- Table Booking Analysis
- Interactive Slicers for dynamic filtering

Dashboard Preview

10. How to Run This Project

1. Download or clone this repository.
2. Open **Zomato_Dashboard.xlsx** in Microsoft Excel (2019 or Microsoft 365 recommended).

3. Enable Editing if prompted.
4. Use the slicers to filter data interactively.
5. Explore charts and KPIs to gain business insights.

11. Results and Conclusion

This project demonstrates how Microsoft Excel can be used as a powerful business intelligence tool for analyzing large datasets. The dashboard converts raw restaurant data into meaningful visual insights, enabling better understanding of customer preferences, pricing strategies, restaurant performance, and market trends. It highlights practical Excel skills used in real-world data analytics projects.

12. Future Enhancements

- Develop the dashboard in Power BI.
 - Connect to a SQL database for automated updates.
 - Automate data cleaning using Power Query.
 - Perform advanced analysis using Python.
 - Build predictive models for restaurant ratings.
 - Publish an interactive online dashboard.
-
